1. Executive Summary

This report documents the footprinting and reconnaissance activities conducted on the target domain networkwalks.com. The objective of this project was to gather publicly available information about the target's infrastructure, identify potential security mechanisms, and discover network hosts using a variety of industry-standard tools.

Using Kali Linux tools including whois, whatweb, nslookup, curl, wafw00f, dnsrecon, Zenmap, Maltego, and theHarvester, a comprehensive profile of the target was established. The reconnaissance successfully identified domain registration details, web technologies, a Web Application Firewall, DNS records, live hosts on the local network, and an exposed webcam interface.

2. Methodology and Tools

The footprinting exercise was divided into several phases, utilizing the following tools:

- **whois:** Used to retrieve domain registration information.
- **whatweb:** Used to fingerprint web technologies and server configurations.
- **nslookup:** Used to resolve the domain to its IP address.
- **curl:** Used to inspect HTTP headers and server responses.
- **wafw00f:** Used to detect the presence of a Web Application Firewall.
- **dnsrecon:** Used to enumerate DNS records.
- **Zenmap (Nmap GUI):** Used to perform network host discovery on the local subnet.
- **Maltego:** Used to visually map relationships and infrastructure.
- **theHarvester:** Used to gather emails, subdomains, and hosts from public sources.

3. Findings

3.1 Domain Registration (whois)

The whois lookup was performed to retrieve public domain registration details for the target.

```

NOTICE: The expiration date displayed in this record is the date the
registrar's sponsorship of the domain name registration in the registry is
currently set to expire. This date does not necessarily reflect the expiration
date of the domain name registrant's agreement with the sponsoring
registrar. Users may consult the sponsoring registrar's Whois database to
view the registrar's reported date of expiration for this registration.

TERMS OF USE: You are not authorized to access or query our Whois
database through the use of electronic processes that are high-volume and
automated except as reasonably necessary to register domain names or
modify existing registrations; the Data in VeriSign Global Registry
Services' ("VeriSign") Whois database is provided by VeriSign for
information purposes only, and to assist persons in obtaining information
about or related to a domain name registration record. VeriSign does not
guarantee its accuracy. By submitting a Whois query, you agree to abide
by the following terms of use: You agree that you may use this Data only
for lawful purposes and that under no circumstances will you use this Data
to: (1) allow, enable, or otherwise support the transmission of mass
unsolicited, commercial advertising or solicitations via e-mail, telephone,
or facsimile; or (2) enable high volume, automated, electronic processes
that apply to VeriSign (or its computer systems). The compilation,
repackaging, dissemination or other use of this Data is expressly
prohibited without the prior written consent of VeriSign. You agree not to
use electronic processes that are automated and high-volume to access or
query the Whois database except as reasonably necessary to register

```

3.2 Web Technology Fingerprinting (whatweb)

whatweb was used to identify the web technologies and server configuration in use by the target site.

```

(kali@kali)-[~]
$ whatweb networkwalks.com
http://networkwalks.com [301 Moved Permanently] Apache, Cookies[wpn_client], Country[UNITED STATES][en], HTTPServer[Apache], HttpOnly[wpn_client], IP[192.232.216.135], RedirectLocation[https://networkwalks.com/], UncommonHeaders[permissions-policy,x-redirect-by:upgrade,referer-policy,x-endurance-cache-level,x-nginx-cache], WordPress[7.1.1], JQuery[3.7.1], MetaGenerator[WordPress 7.1.1], WordPress Download Manager[3.3.58], Open-Graph-Protocol[website], Script[4684NR-IP7B8amp;pid=Var2-56518amp;ipr=Var2-78amp;isc=Var2-12,application/json,application/ld+json,module,speculationrules,text/javascript], Title[Networkwalks Academy], UncommonHeaders[permissions-policy,link,upgrade,referer-policy,x-endurance-cache-level,x-nginx-cache], WordPress[7.1.1]

```

Figure 2: whatweb fingerprinting output

3.3 HTTP Header Inspection (curl)

curl was used to inspect HTTP response headers returned by the target server.

```

kali@kali:~$ curl -I https://networkwalks.com
HTTP/2 200
permissions-policy: private-state-token-redemption=(self "https://www.google.com" "https://www.gstatic.com" "https://recaptcha.net" "https://challenges.cloudflare.com" "https://hcaptcha.com"), private-state-token-issuance=(self "https://www.google.com" "https://www.gstatic.com" "https://recaptcha.net" "https://challenges.cloudflare.com" "https://hcaptcha.com")

content-type: text/html; charset=UTF-8
date: Sun, 20 Sep 2026 02:59:58 GMT
server: Apache

```

Figure 3: HTTP headers retrieved via curl

3.4 Web Application Firewall Detection (wafw00f)

wafw00f was run against the target to determine whether a Web Application Firewall was present.

```

kali@kali:~$ wafw00f https://networkwalks.com

      { Woof! }
    (  )  (  )
   (  )  (  )

3.5 DNS Enumeration (dnsrecon)

dnsrecon was used to enumerate DNS records associated with the target domain.

```

kali@kali:~$ dnsrecon -d https://networkwalks.com

3.6 Domain Resolution (nslookup)

nslookup was used to resolve the target domain to its corresponding IP address.

```
(kali@kali)-[~]
$ nslookup networkwalks.com
Server:      8.8.8.8
Address:     8.8.8.8#53

Name:   networkwalks.com
Address: 192.232.216.135

(kali@kali)-[~]
$
```

Figure 6: nslookup domain resolution

3.7 Network Host Discovery (Zenmap)

Zenmap, the graphical front end for Nmap, was used to perform host discovery across the local subnet.

Figure 7: Zenmap network scan results, part 1

Figure 8: Zenmap network scan results, part 2

3.8 Infrastructure Mapping (Maltego)

Maltego was used to visually map relationships between the target's infrastructure entities.

Figure 9: Maltego infrastructure relationship graph

3.9 Public Source Harvesting (theHarvester)

theHarvester was used to gather emails, subdomains, and hosts associated with the target from public sources.

3.10 Webcam Discovery

During the reconnaissance exercise, an exposed webcam interface was identified on the local network.

Figure 13: Discovered webcam interface, part 1

Figure 14: Discovered webcam interface, part 2

4. Conclusion

The exercise was successful in gathering a comprehensive profile of the target domain, networkwalks.com, using a combination of passive and active reconnaissance tools. The engagement identified domain registration details, the technology stack in use, the presence of a Web Application Firewall, DNS records, live hosts on the local subnet, and an exposed webcam interface, providing a solid foundation for any subsequent security assessment phases.
